

UniAuth

The only MFA built on Zero Trust Principles

Authenticate your users and devices for enabling anywhere to anywhere access

Tailored to protect today's distributed environment from cyber-attacks while empowering your workforce to work from anywhere. Block Armour's UniAuth solution enables businesses to embark on their digital transformation journey without having to worry about security.

Prevent access from rogue devices

Standard MFA solutions permit access from any device making it easier for attackers to compromise access. Block Armour's UniAuth solution has the unique capability to identify rogue devices and prevent access from them.

Plug and Play deployment across your ecosystem

Roll out our solution within a few days to secure access to applications, whether on-premise or in the cloud. No code changes are required to be done in applications. Block Armour's UniAuth solution is deployed as an overlay over your distributed ecosystem.

Simplify Management

Extend MFA capability to protect other services with the click of a button. Manage and monitor user access from a centralized console. The platform provides granular control and visibility of who has accessed which applications from where (Geo-location) and using which device irrespective of local/remote access.
