

Digital Vault

Ultimate security for your enterprise's most sensitive content; powered by Blockchain technology

Compliant end-to-end encryption of information

Locked-down & secured access to critical systems

Can be hosted on premise or in the Cloud

Institutions are feeling the heat as information breach incidents continue to grow and existing solutions struggle to keep pace

The average cost of a data breach will exceed \$150 million by 2020

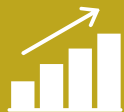

Around 1 billion records were compromised worldwide

40% of companies expect a data breach caused by malicious insiders

43 percent of cyber attacks target small and medium business

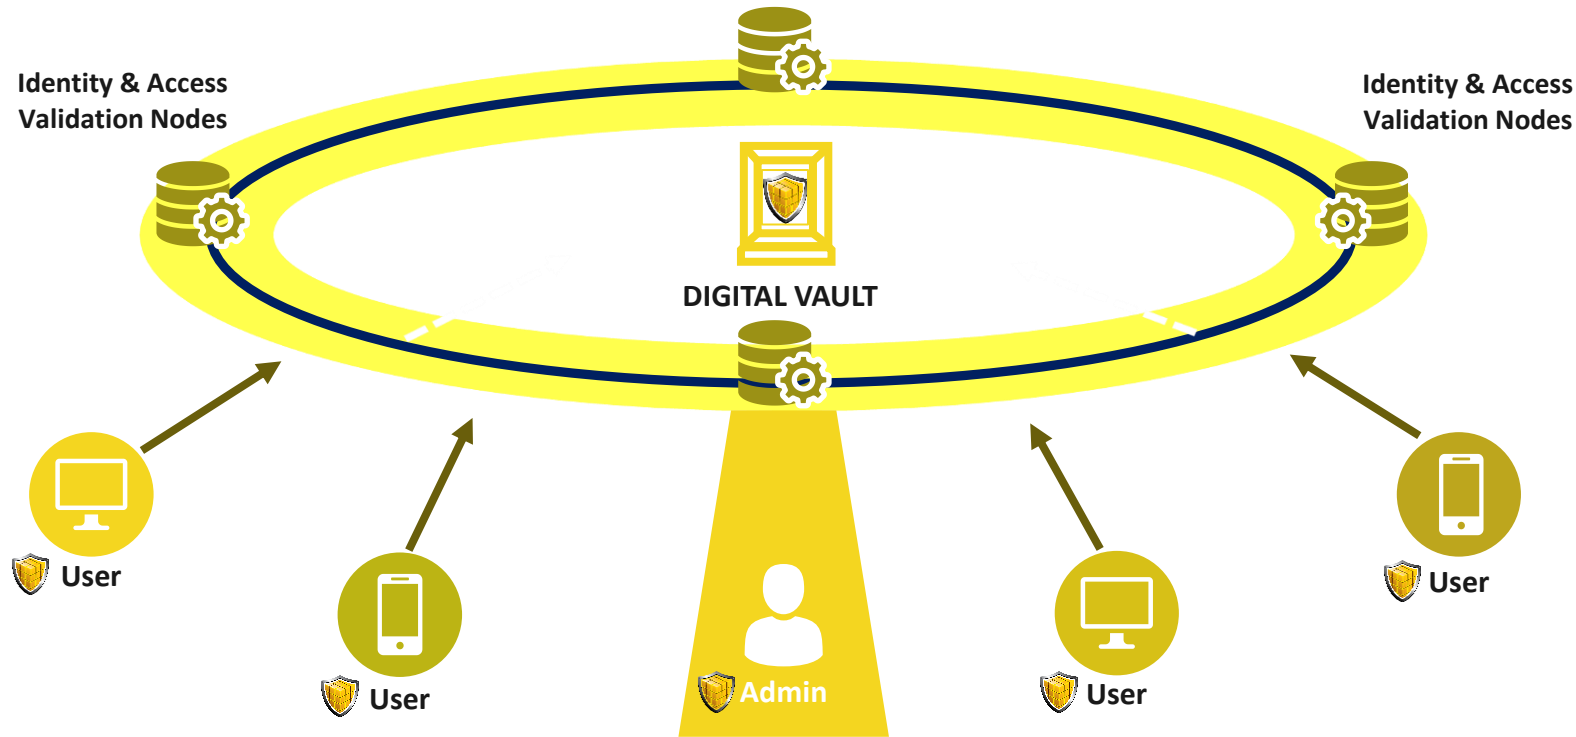

Growing regulatory compliance GDPR, HIPAA, etc

Since 2013 there are 3,809,448 records stolen from breaches very day, 158,727 per hour, 2,645 per minute and 44 every second of every day

Block Armour Digital Vault secures sensitive information with military-grade encryption and Blockchain technology

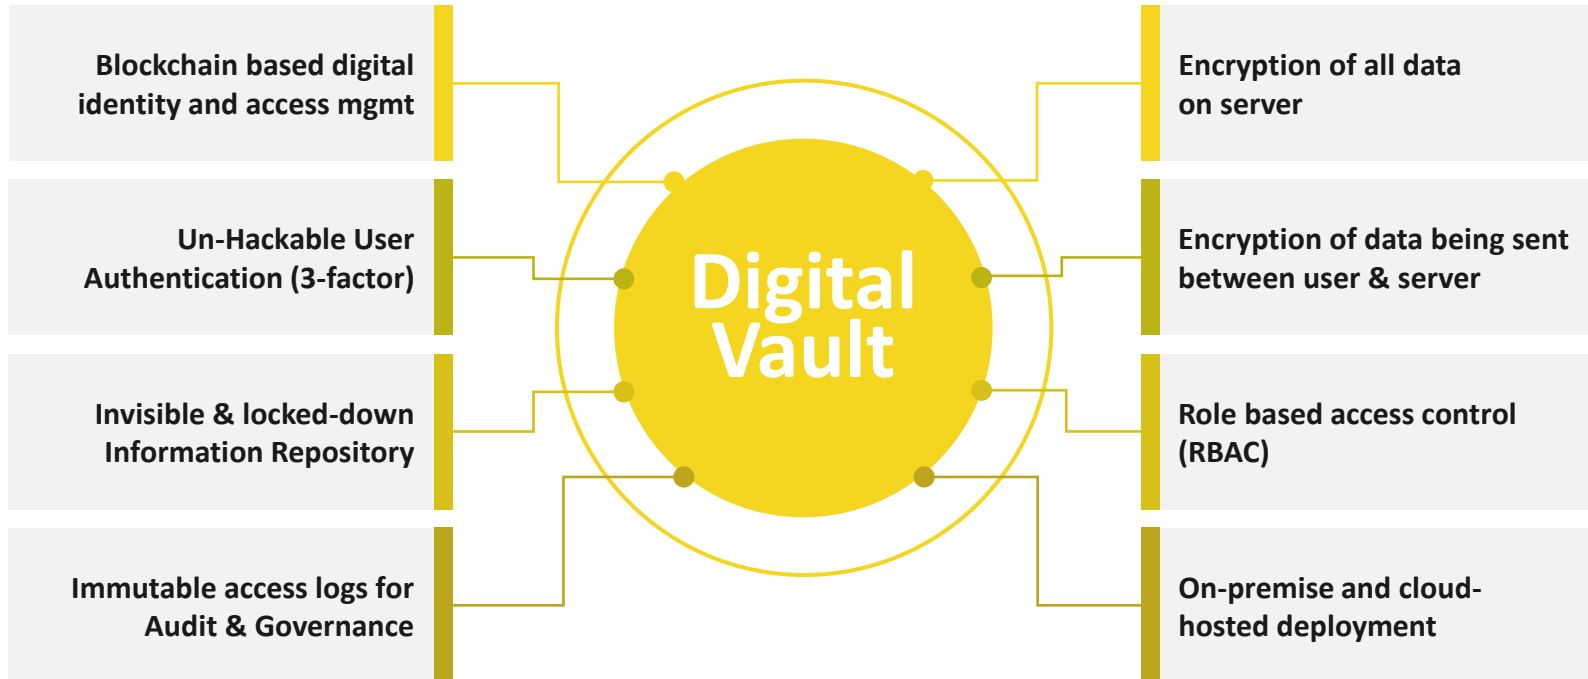

The platform encrypts all stored content, conceals the server itself and leverages blockchain-based digital signature for identity and authentication to securely provide access to bonafide users

... allowing institutions to comprehensively address security and comply with regulatory requirements

Digital Vault - Key Features

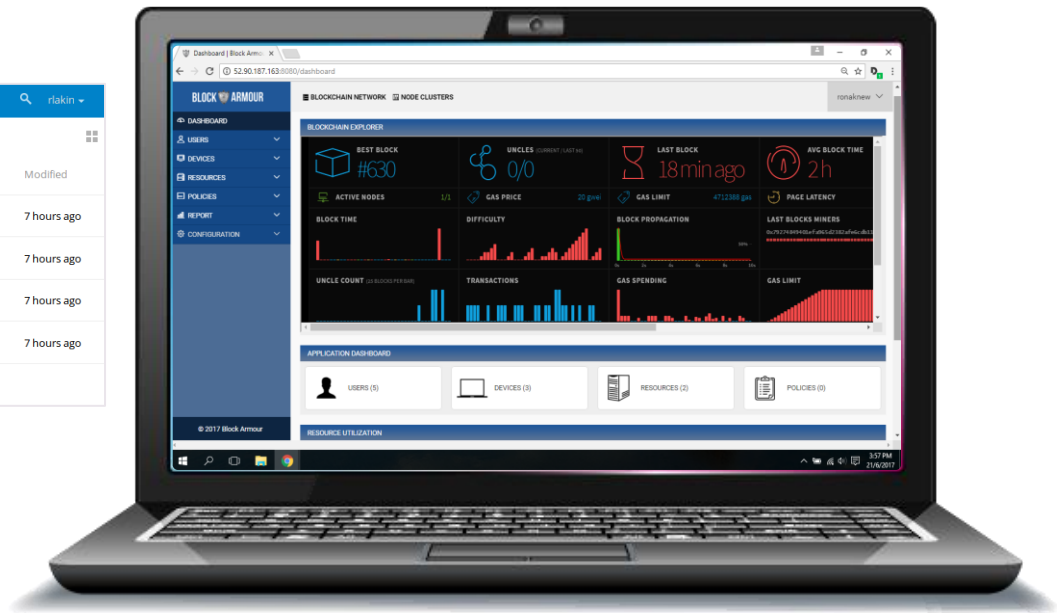

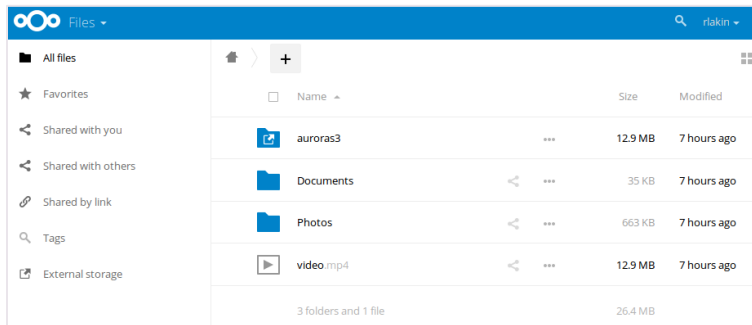

Block Armour Digital Vault provides maximum security for your information and instant availability wherever you need to access it

The solution allows institutions to confidently protect, control and monitor data and communication within and beyond the organization and guarantee compliance with relevant local and international regulatory requirements

Managed via a browser, Block Armour Digital Vault puts IT in complete control of the solution

... whether hosted on premise or in the Cloud

Offered as a package, the system provides any institution with an elegant, easy-to-use end-to-end solution

The Result: Maximum security for your most sensitive information and instant availability wherever you need to access it

End to End Cryptographic Encryption

Platform visible only to authorized users – Safe to host and share files on the internet

Un-hackable and simple user authentication coupled with role-based access control

Instant visibility of any illegitimate attempts to access content

You finally have a holistic, elegant & integrated solution to protect your systems and data from next-gen cyber attacks

Learn how you can secure your most sensitive content and confidently address regulatory compliance
